**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 46-55, drawn to a method for modifying a dielectric constant of a dielectric material comprises forming a plurality of holes in the dielectric material, classified in class 385, subclass 126.
  - II. Claims 56-90, drawn to an antenna having a ground plane and a dielectric material, classified in class 343, subclass 700MS.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions Group I and Group II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed in Group 1 does not require the particulars of the subcombination as claimed in Group II. The subcombination has separate utility such as an antenna of the ground plane of Group II.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
